

CRC 670

CELL-AUTONOMOUS IMMUNITY

**UNIKLINIK
KÖLN**

Seminar

Domagoj Vucic

Genentech
South San Francisco, USA

**“Regulation of cell death signaling in
inflammation and tumor progression by RIP
kinases”**

Friday, September 15, 2017, 04:00 p.m.
Main Lecture Hall, CECAD Research Center
Joseph-Stelzmann-Str. 26, 50674 Köln

Host:

Manolis Pasparakis

Domagoj Vucic, PhD, is a Principal Scientist at Genentech in South San Francisco, USA. He obtained B.S. from the University of Zagreb, Croatia, and Ph.D. from the University of Georgia, USA. He completed postdoctoral training in the laboratory of Dr. Vishva Dixit. Dr. Vucic's laboratory investigates the biological role of modulators of signaling pathways (e.g. ubiquitination-mediated regulation of NF- κ B pathways), and their involvement in cellular processes triggered by TNF family ligands and other pro-inflammatory stimuli. At Genentech, he leads an effort to develop compounds for blocking uncontrolled inflammatory responses and/or enhancement of the survival of damaged cells and tissues.
